SGS has been contracted for the verification of direct and indirect Greenhouse Gas emissions in accordance with

ISO 14064-3:2019

as provided by UNIVERSAL MICROELECTRONICS CO., LTD. (hereinafter referred to as "UMEC"), No. 3, 27th Rd., Taichung Industrial Park Taichung City 408217, Taiwan, in the GHG Statement in the form of GHG report.

Roles and responsibilities

- The management of UMEC is responsible for the organization's GHG information system, the development and maintenance of records and reporting procedures in accordance with that system, including the calculation and determination of GHG emissions information and the reported GHG emissions.
- The verification was based on the verification scope, objectives and criteria as agreed on 01 February 2024.
- Verification Criteria: ISO 14064-1:2018
- Verification Period: 18 May 2026 to 23 June 2026.

Scope

- GHG information for the following period was verified: 01 January 2025 to 31 December 2025
- Location/boundary of the activities:
 - No. 3, 27th Rd., Taichung Industrial Park Taichung City 408217, Taiwan
 - No. 2, 27th Rd., Taichung Industrial Park Taichung City 408217, Taiwan
- Types of GHGs included: CO₂, CH₄, N₂O, HFCs, PFCs, SF₆, NF₃
- The IPCC 2021 AR6 GWP values are applied in this inventory.
- Emission factor:
 - Direct emissions: Greenhouse Gas Emission Factor, MOENV(2024.02.05).
 - Indirect emissions:
 - Electricity emission factor is 0.466 kgCO₂e/kwh (Announced by Energy Administration, Ministry of Economic Affairs in 2026).
 - The secondary database has Carbon Footprint Information Platform, Ecoinvent 3.11.

- The level of assurance for category 1 and category 2 agreed is that of reasonable assurance. Category 3 to category 6 agreed is that of limited assurance.
- Materiality : 5%
- The version of inventory sheet: 2026/06/23
- The version of GHG statement: 2026/06/23
- Intended user of the verification opinion: Private

Objective

The purposes of this verification exercise are, by review of objective evidence, to independently review:

- Whether the GHG emissions are as declared by the organization's GHG statement
- The data reported are accurate, complete, consistent, transparent and free of material error or omission.

Conclusion

SGS's approach is risk-based, drawing on an understanding of the risks associated with reporting GHG emissions information and the controls in place to mitigate these. Our examination includes assessment, on a test basis, of evidence relevant to the amounts and disclosures in relation to the organization's reported GHG emissions. We planned and performed our work to obtain the information, explanations and evidence that the GHG emissions of category 1 and category 2 are free from material misstatement and nothing has come to our attention to cause us to believe that the GHG statement for category 3 to category 6 is materially misstated.

- The greenhouse gas emissions is 4,272.932 metric tonnes of CO₂ equivalent
